

ENERGY PREDICAMENT

Facts, Fantasies, and Formulating your Future 

A Thinking for Results Strategic Presentation

**“A thought
provoking,
solutions
oriented
session”**

"Randy's presentations are "Down to Earth" refreshing. His latest presentation "Energy Predicament" was truly thought provoking, making us all aware that our limitless thirst and consumption of fossil fuel, may soon have to come to a screeching halt unless there is change. Randy was able to present this serious subject in a very entertaining way."

Jack A. Vincent, Sage Metering Inc.

"Randy Park has been our keynote and guest speaker on several occasions. His presentations have always been inspiring, informative and very worthwhile. During his most recent session with our group, Randy's presentation covering our "Energy Predicament" was not only thoroughly enjoyable, but also very thought provoking. Two-thumbs-up for Randy Park."

Wally Nickel, ISA Hamilton.

"Many thanks for your interesting and thought provoking talk on the energy situation both locally and worldwide. As you know I have worked in the energy industry throughout my career and am well aware of the need for conservation. What did escape was the realization that some of the proposed solutions and alternate fuels could be problematic in themselves."

Frank Allison

It is said that we live in an information economy. But the information economy and the manufacturing economy before it were built on abundant supplies of inexpensive energy. There is growing evidence that the era of cheap and plentiful energy is coming to an end. ***Are you prepared?***

Regulatory bodies, governments, and the public are demanding greater accountability for your decisions as an executive or director of your organization. And it is not just your actions, it is also omissions. Do you understand the critical role that the global energy situation will have on your organization? ***Are you prepared?***

In the past, you could expect governments to step in if your organization was hit with unexpected energy prices. But in today's "climate" of Global Warming awareness, citizens are not going to put up with higher energy prices for themselves if corporations do little to address their own energy use. ***Are you prepared?***

Energy Predicament is a presentation that examines the two most critical factors affecting future energy security: the decline of the world's energy resources, and the thinking of the people who manage and consume those resources.

This presentation is entertaining, interactive, and challenging. Professional speaker Randy Park presents the facts, then actively encourages discussion and debate. You will examine decisions from the point of view of energy consumers, producers, and governments. Why do these people make the decisions they do? Will their thinking change? How does it affect your particular situation?

This round table session deals with scientific and economic facts as well as long term trends. Sometimes disturbing, certainly thought provoking, this session will affect your thinking not only on energy issues, but may cause you to examine other aspects of your strategic plans.

ENERGY PREDICAMENT

Facts, Fantasies, and Formulating your Future 

Topics Addressed

The Problem

- The global oil situation - what is Peak Oil?
- The North American natural gas situation
- Electricity in Canada - the critical issue
- Ethanol and other biofuels
- Renewable energy

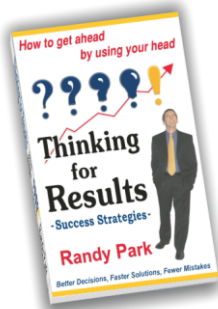

Your Responses

- Exploring possible energy scenarios
- Analyzing your current energy requirements
- Identifying your energy vulnerabilities
- Developing a Strategy Tree
- Enlisting the help of your workforce

About Randy Park

Professional speaker and author Randy Park is a "thought provoker." With "Thinking for Results" he has worked with corporations and associations to deliver Better Decisions, Faster Solutions, and Fewer Mistakes. As both a physicist and an expert in how people think and make decisions, Randy provides you with the technical information as well as the strategic tools that you need to understand and plan for your energy situation.

Randy follows and analyzes energy supply and demand issues and the often obscure interrelationships between oil, natural gas, electricity, renewables, hydrogen, transportation, and the economy. A straight talker, his greatest strength is taking complex issues like the Energy Predicament and distilling them down to the essentials. Randy cuts through the spin, delusions, and just plain fantasies that are all too common in the energy picture. His presentations are interactive and entertaining. You won't look at your energy situation the same way again.
